

BANDWIDTH BONDING

AGGREGATE
UP TO 4 CONNECTIONS!

NO FIBER?
NO
PROBLEM!

Unlock faster
uplink speeds
through
bonding!

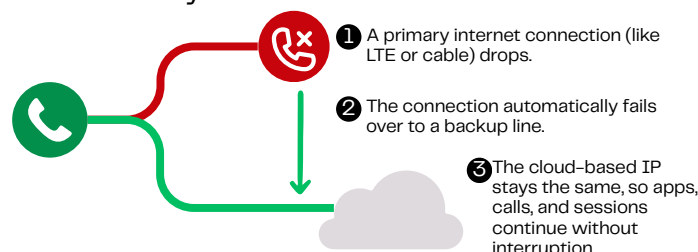

HOW IT WORKS:

Instead of using one WAN link at a time (like traditional failover), Bonding splits packets across multiple WANs simultaneously, **combining throughput** and **improving session reliability**.

- ✓ **MORE ACTIVE WANs**
- ✓ **MORE BANDWIDTH**
- ✓ **BETTER PERFORMANCE**

PLUS: IP ADDRESS & SESSION CONTINUITY

Give your network a consistent, cloud-based IP address — so even if one connection drops or changes, your apps, video calls, and file transfers stay seamless.
